Portfolio: raghavanand-prog.github.io/portfolio • GitHub: github.com/raghavanand-prog

PROFESSIONAL SUMMARY

MCA (Cybersecurity) student with six months of hands-on IAM experience at SpazorLabs and three independently built security projects: a DevSecOps pipeline whose scanners block vulnerable deployments, a role-secured data platform with token-reuse detection and PII masking, and a steganalysis platform with a security-reviewed upload pipeline. Seeking entry-level roles in application security, IAM, DevSecOps and security operations.

EXPERIENCE

SpazorLabs | IAM & Cloud Security Intern

Jan 2026 – Jun 2026

- Contributed to IAM and cloud security initiatives across a six-month internship.
- Worked on identity governance and access security controls, strengthening the organisation's security posture.

PROJECTS

Secure CI/CD Pipeline with Automated DevSecOps Gates | AWS, Terraform, Docker

2026

github.com/raghavanand-prog/PARA_CI-CD

- Built a fail-closed pipeline: a YAML-policy gate (7 fixture tests) blocks the release when a scan fails, or when a scanner is missing, crashes or returns a malformed report.
- Automated 5 scanners per build: Semgrep (SAST), npm audit and OWASP Dependency-Check (SCA), Gitleaks (secrets), Checkov (IaC), Trivy (containers); deployed to ECS Fargate by immutable image digest.
- Built least-privilege AWS infrastructure in 8 Terraform modules (KMS, scoped IAM, private subnets) and a JWT layer with rotating refresh tokens; root-caused 8 real production incidents via CloudTrail and logs.

Customer360 – Role-Secured Customer Data Platform | FastAPI, PySpark, PostgreSQL, React

Sep 2026

Live: customer360-console.vercel.app • github.com/raghavanand-prog/Customer_360

- Secured the API with JWT refresh-token reuse detection (a replayed token revokes the session family), Argon2id, server-side 4-role RBAC and PII masking, and parameterised SQL segment rules; wrote a threat model for its RAG assistant (per-tool RBAC, no LLM-chosen tools).
- Built the PySpark pipeline behind it (9 files, 38 data-quality rules); identity resolution reached 0.994 precision and 0.857 recall on a synthetic benchmark; 34-table PostgreSQL, React/TypeScript console, 30 tests, on Vercel.

StegoShield – AI Steganography & Steganalysis Platform | Python, scikit-learn, Flask

2026 – Present

github.com/raghavanand-prog/StegoShield • Live: stegoshield-5b8r.onrender.com

- Built LSB steganography with SHA-256-framed payloads and a Random Forest detector (49 features, leak-safe split by source image); showed via ablation and cross-validation that class weighting raised false positives.
- Hardened uploads (libmagic sniffing, size/dimension caps, no disk writes, CSP, rate limiting) and fixed a reflected XSS found in a self-conducted security review.

SKILLS

Security: IAM, RBAC, JWT/token security, Argon2id/bcrypt, PII masking, XSS/SQL-injection defence, STRIDE threat modelling, DevSecOps (Semgrep, OWASP Dependency-Check, Gitleaks, Checkov, Trivy)

Cloud & DevOps: AWS (IAM, KMS, VPC, ECS Fargate, ECR, CodePipeline/CodeBuild, CloudWatch), Terraform, Docker, GitHub Actions

Programming: Python, Bash, Linux, JavaScript/Node.js, TypeScript, SQL, PostgreSQL, PySpark, FastAPI, React, Git, scikit-learn

CERTIFICATIONS

IBM Cybersecurity Analyst • AWS Cloud Practitioner Essentials • Oracle: Applied Database Systems using Oracle AI Database • Adobe University Hackathon (Participant)

EDUCATION

CHRIST (Deemed to be University), Bengaluru | **MCA – Cybersecurity**

May 2026 – Jun 2028 (Expected)

Guru Nanak Dev University, Amritsar | **Bachelor's in Computer Science, CGPA 7.0/10**

2023 – 2026
