Portfolio: raghavanand-prog.github.io/portfolio • GitHub: github.com/raghavanand-prog

PROFESSIONAL SUMMARY

MCA student at CHRIST University who builds end-to-end data and cloud solutions: a customer data platform that unifies fragmented records into a single customer profile behind a secured API and web console, plus an automated cloud CI/CD pipeline. Six months of enterprise identity and access experience at SpazorLabs. Seeking a Technical Consultant role where I can turn business requirements into working, secure, well-documented solutions.

PROJECTS

Customer360 – Unified Customer Data Platform | PySpark, FastAPI, PostgreSQL, React

Sep 2026

Live: customer360-console.vercel.app • github.com/raghavanand-prog/Customer_360

- Built a PySpark pipeline that ingests 9 source files across 3 formats and validates every record against 38 data-quality rules across 6 dimensions, classifying each as accepted, warned, quarantined or rejected instead of silently dropping it.
- Designed deterministic identity resolution that merges fragmented records into a single customer profile with stable IDs and a merge/split audit trail; reached 0.994 precision and 0.857 recall (F1 0.92) against ground truth.
- Exposed the data through a FastAPI backend and a 9-screen React + TypeScript console over 34 PostgreSQL tables; secured with JWT auth, 4-role RBAC and server-side PII masking. 30 automated tests passing; deployed on Vercel.

Automated CI/CD Pipeline with Security Gates | AWS, Terraform, Docker

2026

github.com/raghavanand-prog/PARA_CI-CD

- Designed a CI/CD pipeline on AWS CodeBuild and CodePipeline that deploys to ECS Fargate and blocks the release when a scan fails, rather than only raising an alert.
- Automated five checks before deployment: static analysis (Semgrep), dependency scanning (npm audit, OWASP Dependency-Check), secret scanning (Gitleaks), Terraform IaC scanning (Checkov) and container scanning (Trivy).
- Built a stateless JWT authentication layer with short-lived access tokens and a server-tracked refresh token that rotates on every use, making sessions revocable.

StegoShield – AI Steganography & Steganalysis Platform | Python, scikit-learn, PyTorch

2026 – Present

github.com/raghavanand-prog/StegoShield • Live: stegoshield-5b8r.onrender.com

- Building a machine learning system, deployed as a live web app, that detects and classifies steganographic content hidden in image files.

WORK EXPERIENCE & INTERNSHIPS

SpazorLabs | IAM & Cloud Security Intern

Jan 2026 – Jun 2026

- Contributed to IAM and cloud security initiatives across a six-month internship.
- Worked on identity governance and access security controls, strengthening the organisation's identity governance and cloud security posture.

SKILLS

Data & Backend: PySpark, SQL, PostgreSQL, FastAPI, REST APIs, data quality & identity resolution

Programming & AI/ML: Python, TypeScript, React, Bash, Linux, Git/GitHub; scikit-learn, PyTorch

Cloud & DevOps: AWS (CodeBuild, CodePipeline, ECS Fargate), Terraform, Docker, GitHub Actions, Vercel

Security: IAM, RBAC, JWT/token security, PII masking, DevSecOps scanning (Semgrep, Trivy, Checkov, Gitleaks)

CERTIFICATIONS & TRAINING

- Adobe University Hackathon — Participant — Adobe
- Applied Database Systems using Oracle AI Database — Oracle
- AWS Cloud Practitioner Essentials — AWS Training & Certification
- IBM Cybersecurity Analyst — IBM

EDUCATION

CHRIST (Deemed to be University), Bengaluru

May 2026 – Jun 2028 (Expected)

Master of Computer Applications (MCA) — Cybersecurity

Guru Nanak Dev University (GNDU), Amritsar

2023 – 2026

Bachelor's in Computer Science | CGPA: 7.0 / 10
